- Road Network
- Lake & Pond
- Mangrove
- Swamp
- Scouring

**FLOOD SUSCEPTIBILITY**

- Very High
- High
- Moderate
- Low

**LANDSLIDE**

**VERY HIGH**  
Areas usually with steep to very steep slopes and underlain by weak materials. Recent landslides, scarps, and erosion cracks are present. Human induced effects could be an aggravating factor.

**HIGH**  
Areas usually with steep to very steep slopes and underlain by weak materials. Areas with numerous old and inactive landslides.

**MODERATE**  
Areas with moderately steep slopes. Soil creep and other indications for possible landslide occurrence are present.

**LOW**  
Gently sloping areas with no identified landslides.

**ACCUMULATION ZONE**  
Areas that could be affected by landslide debris.

**FLOOD**

**VERY HIGH**  
Areas likely to experience flood heights of greater than 2 meters and/or flood duration of more than 3 days. These areas are immediately bordered during heavy rains of elevated flood, include topography of topographic lows such as active river channels, abandoned river channels and areas along river banks, also prone to backflow.

**HIGH**  
Areas likely to experience flood heights of 1.0 to 2.0 meters and/or flood duration of more than 3 days. These areas are immediately bordered during heavy rains of elevated flood. Relative topography of topographic lows such as active river channels, abandoned river channels and areas along river banks, also prone to backflow.

**MODERATE**  
Areas likely to experience flood heights between 0.5 and 1 meter and/or flood duration of 1 to 3 days. These areas are subject to widespread inundation during prolonged and extensive heavy rainfall or extreme weather condition. Flooded areas, avoid fields, and reflect valleys are areas moderately subjected to flooding.

**LOW**  
Areas likely to experience flood heights of 0.5 meter or less and/or flood duration of less than 1 day. These areas include low hills and gentle slopes. They also have sparse to moderate drainage density.
